

Where in CLIP does everyday object-category variability arise?

Layer-wise reanalysis of the CCN 2026 BabyView dispersion metrics

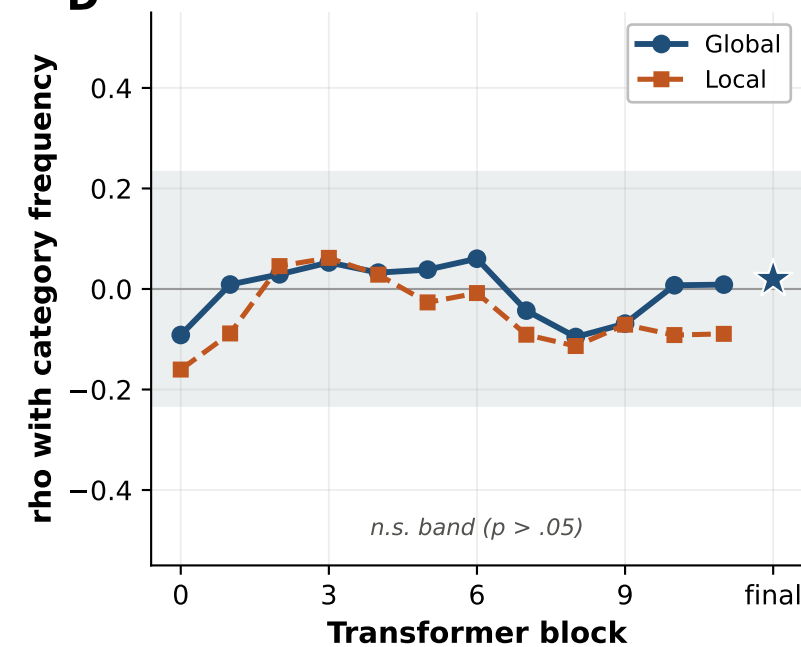

A

Global dispersion is built late; local dispersion is not

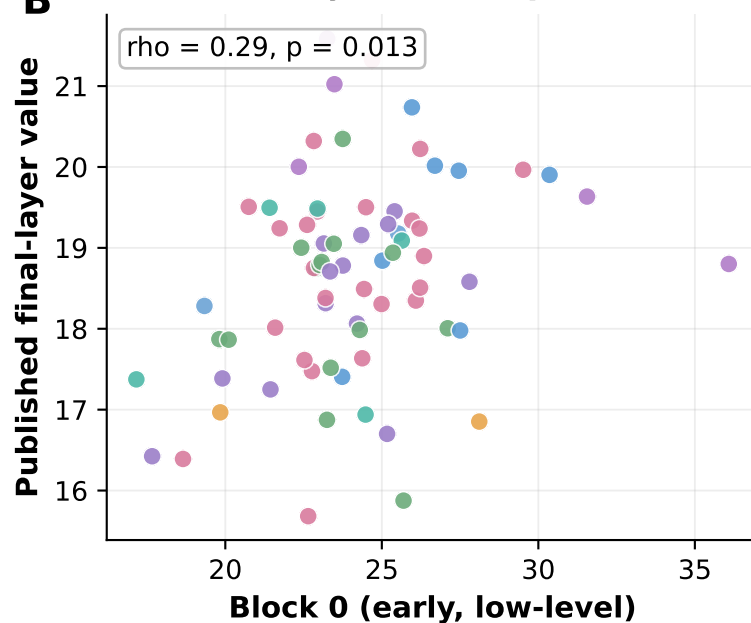

D

Frequency coupling: weak at every depth

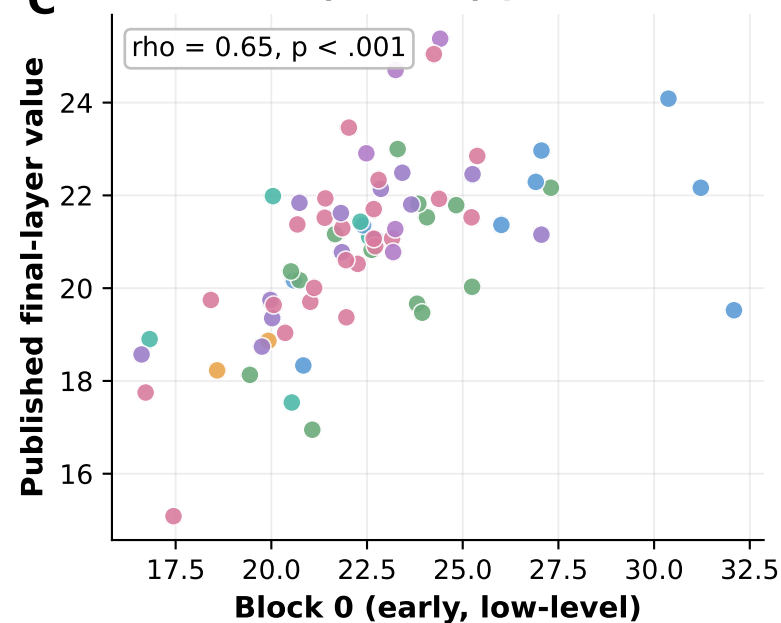

B

Global: early does not predict final

C

Local: early already predicts final

72 categories, N = 5,921 validated crops
Public privacy-filtered release
(body-part categories withheld)
